DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-10 and 21 are rejected under 35 U.S.C. 102(a) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Fujihara et al, EP Patent Application No. 1213111 A2.

Fujihira et al discloses b<u>iodegradable</u> resin compositions comprising <u>biodegradable</u> resin and natural or synthetic mica;

(2) The reference also relates to a method for improving elastic modulus of <u>biodegradable</u> resin composition comprising synthetic <u>mica</u> as crystal nucleating agent and aliphatic <u>polyester</u> resin wherein the composition is allowed to stand for 30-180 seconds at 80-130 degrees C;

Application/Control Number: 10/537,168 Page 3

Art Unit: 1796

(3) Production of the <u>biodegradable</u> resin composition, involves kneading aliphatic <u>polyester</u> resin and 0.5-20 weight% (wt.%) of synthetic <u>mica</u> at 150-200 degrees C.

(4) The reference further relates to housing material comprising <u>biodegradable</u> resin composition.

The preferred Composition comprises a <u>biodegradable</u> resin that is an aliphatic <u>polyester</u> resin such as <u>polylactic acid</u>. The <u>biodegradable</u> resin material contains 0.1-20 wt.% of an additive (such as a <u>carbodiimide</u> compound) for suppressing <u>hydrolysis</u>, along with the aliphatic <u>polyester</u> resin, 0.5-5 wt.% of an organic nucleating agent (such as aliphatic carboxylic acid amide or aliphatic carboxylic acid ester) and 0.5-20 wt.% of synthetic <u>mica</u> or 5-20 wt.% of natural mica.

The compositions are used for improving elastic modulus of <u>biodegradable</u> resin material which is used for molding housings and structural components of household electric appliances and electronic equipment. See claims 1-55.

No patentable difference is ascertained between the present and patented inventions. Because the components of the EP invention are essentially the same as applicant's, they are expected to possess the same inherent properties in, for example, specific gravity.

- 4. Claims 1-10 and 21 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Fujihara et al, US Patent Publication No. 20020128344.
- 5. This reference is equivalent to the EP reference above and is relied upon for the same reasons. See claims 1-55.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kriellion A. Sanders whose telephone number is 571-272-1122. The examiner can normally be reached on Monday through Thursday 8:30am-7:00pm.

Art Omt. 1790

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Harold Pyon can be reached on 571-272-1498. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
